How is industrial robotic doing?

Source: OECD

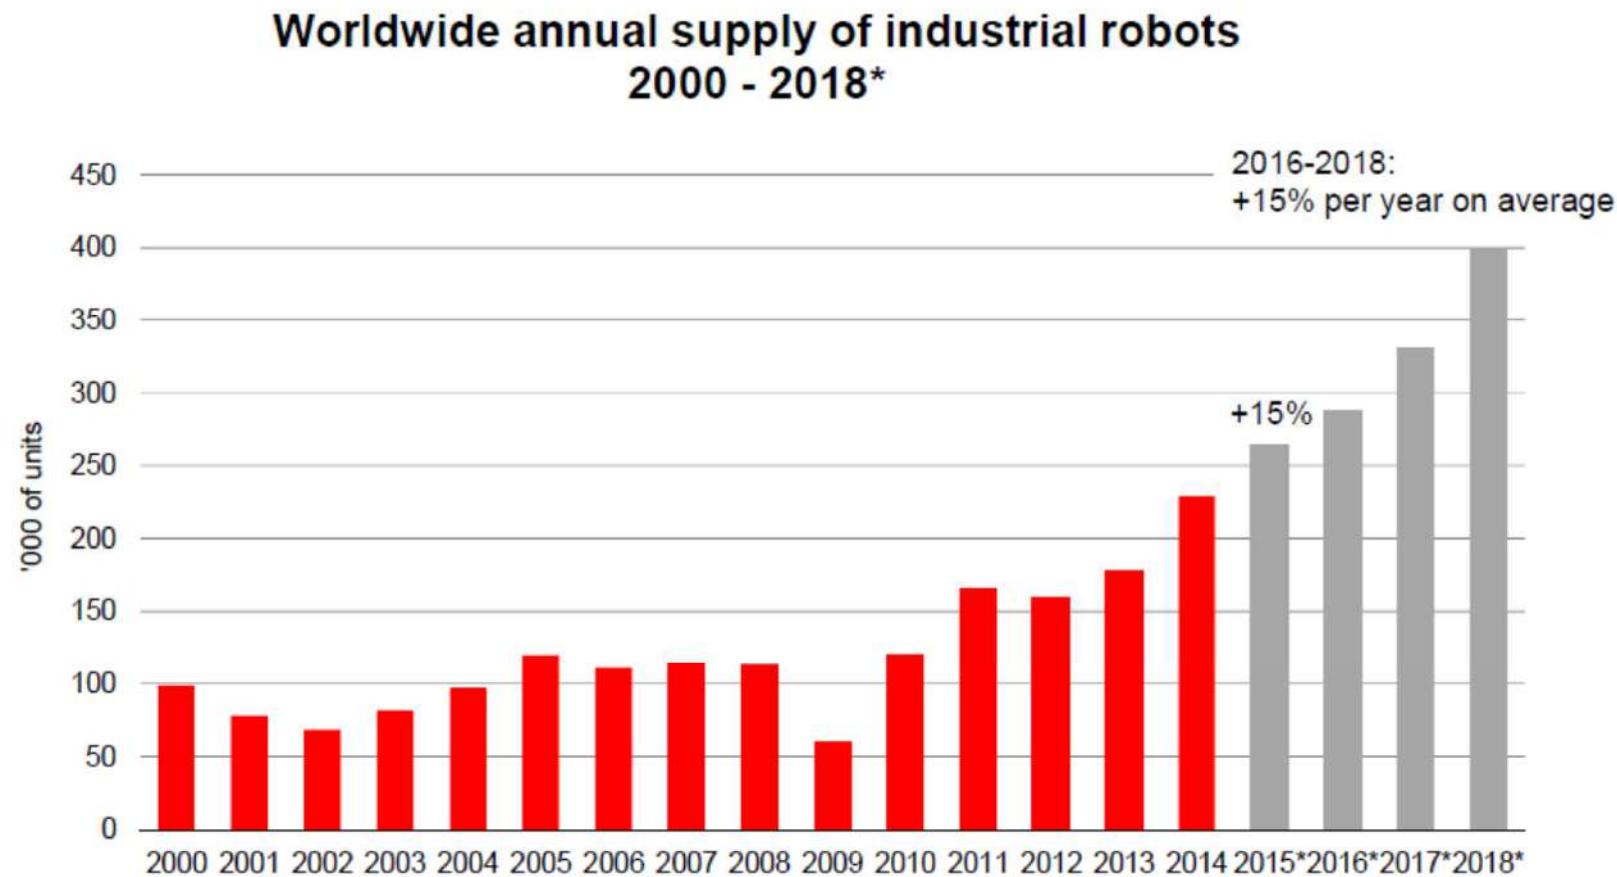

An excellent source of information...

Industrial robotics: some statistics

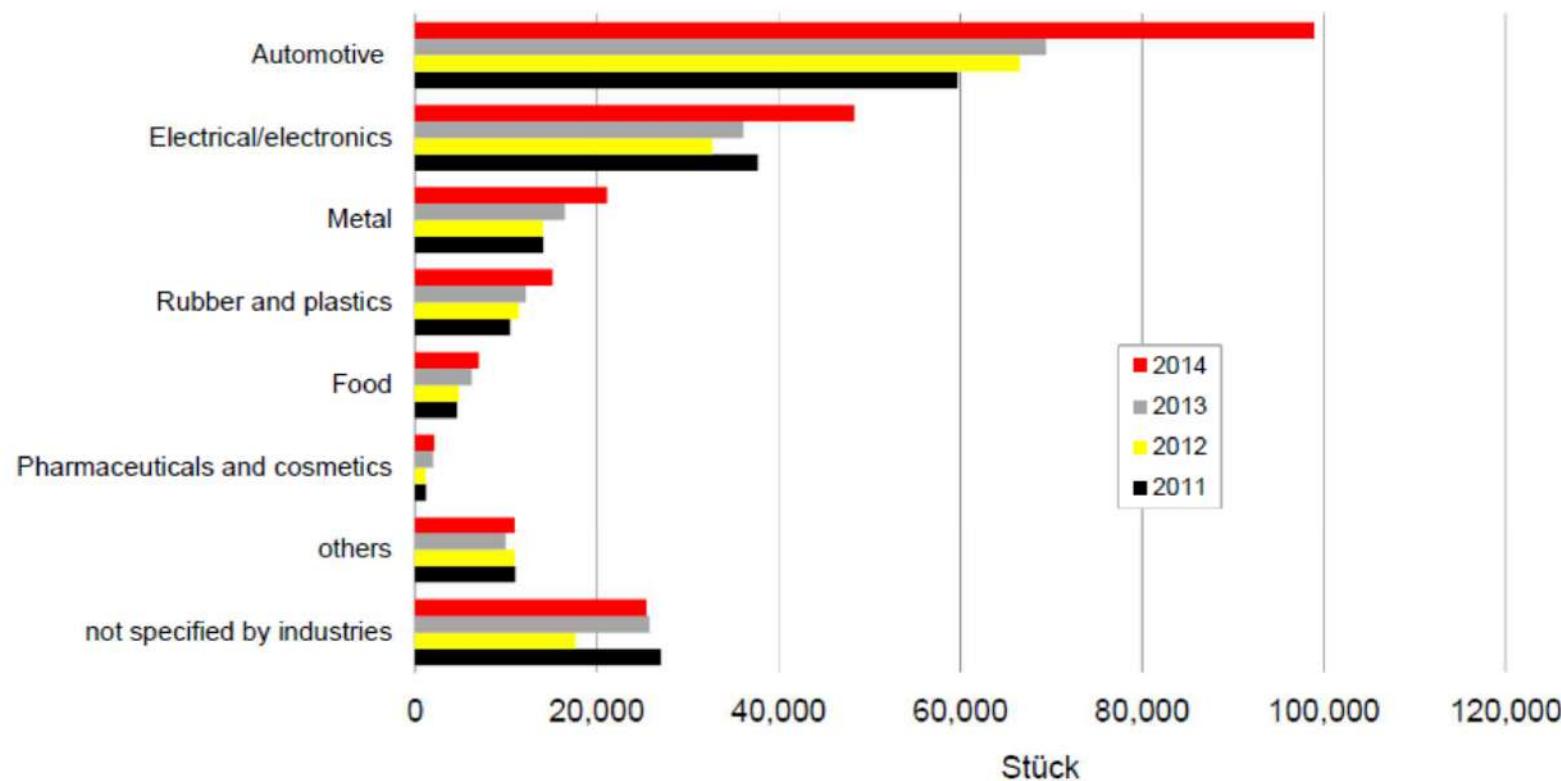

*forecast

Source: IFR World Robotics 2015

Industrial robotics: some statistics

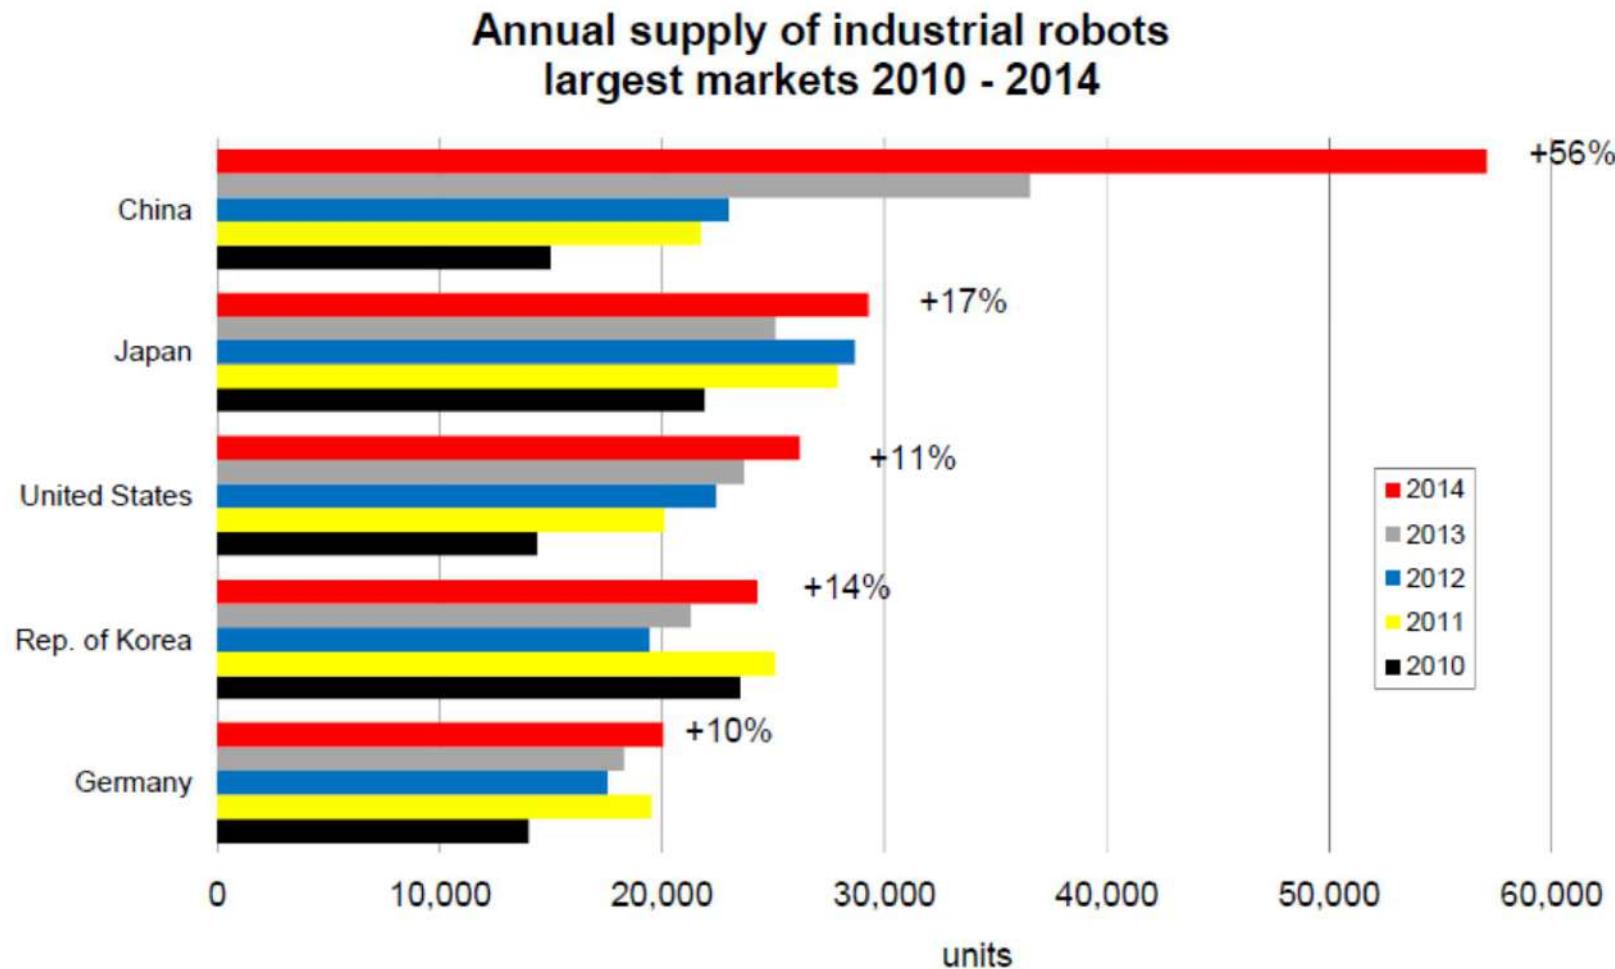

Estimated worldwide annual supply of industrial robots
at year-end by main industries 2011 - 2014

Source: IFR World Robotics 2015

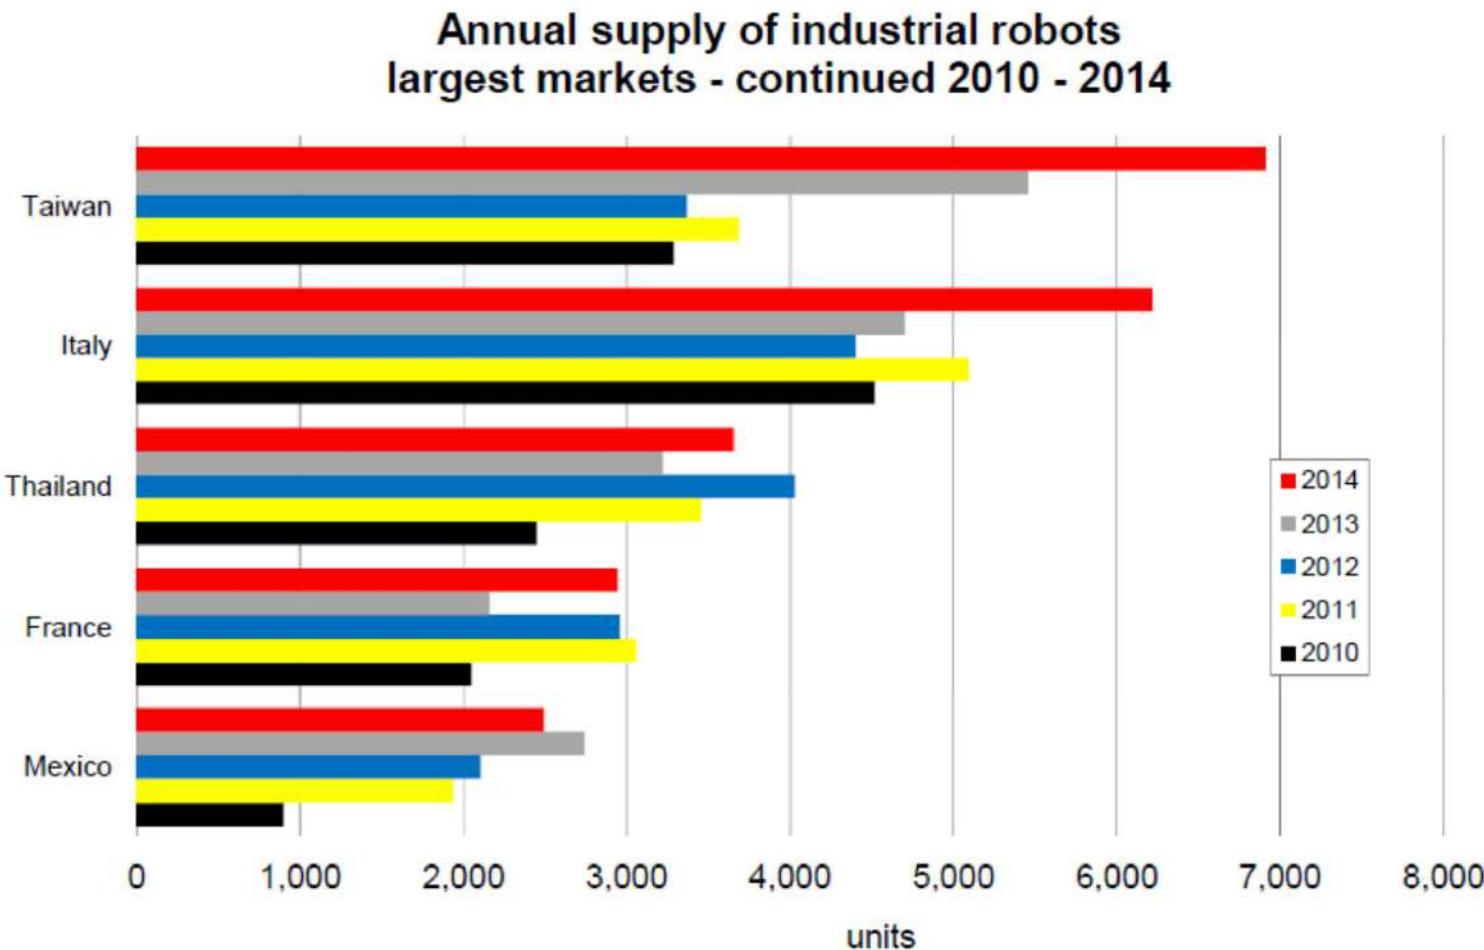

Industrial robotics: some statistics

Source: IFR World Robotics 2015

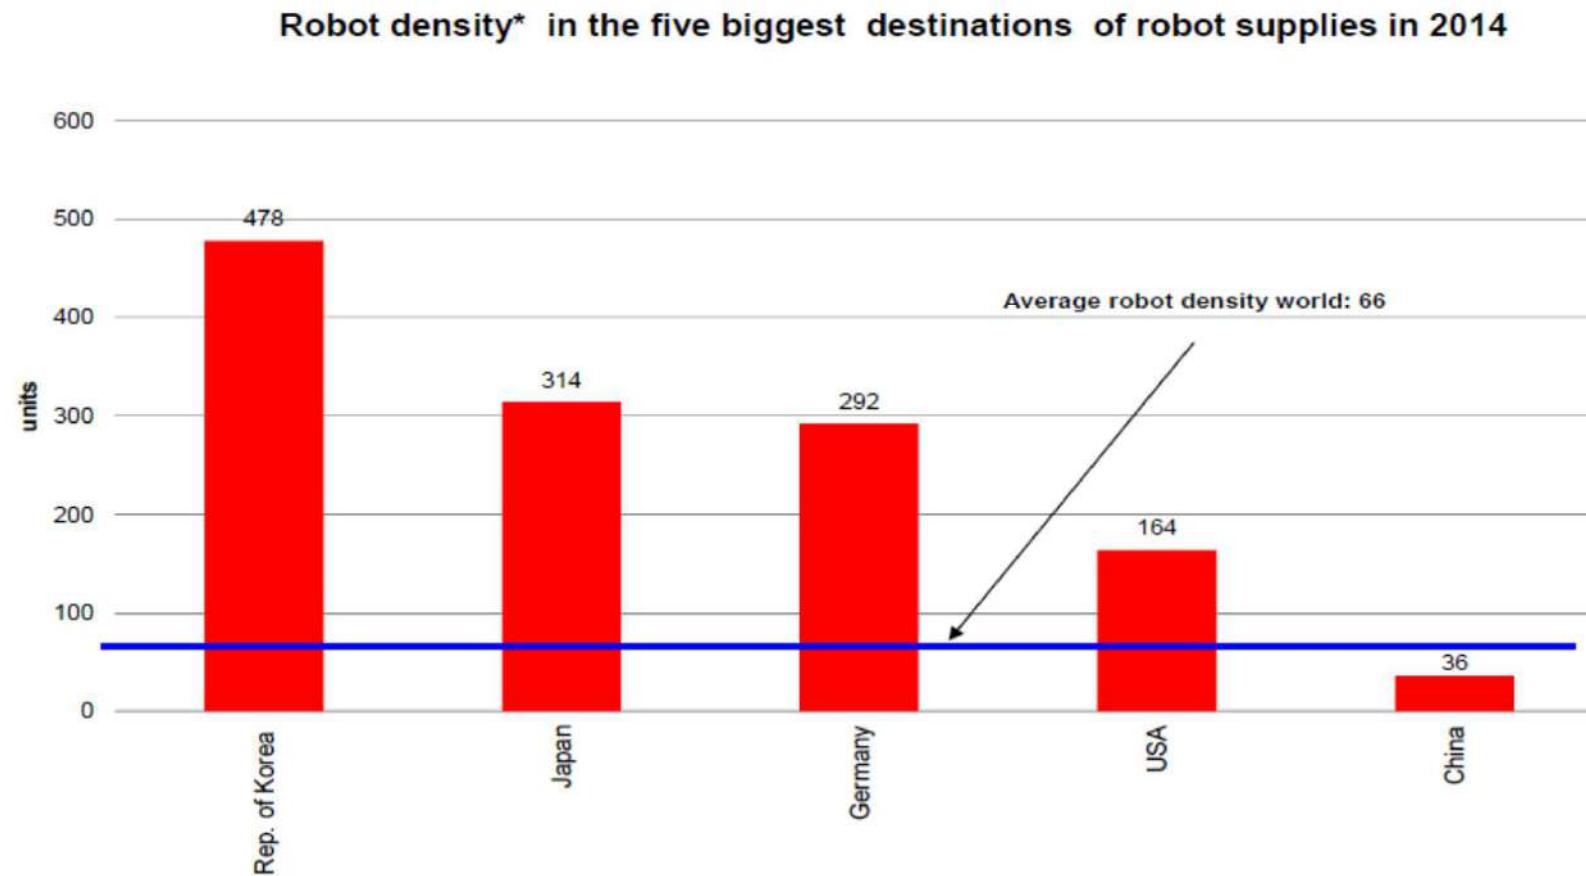

Industrial robotics: some statistics

Source: IFR World Robotics 2015

Industrial robotics: some statistics

Source: IFR World Robotics 2015

Industrial robotics: some statistics

- Worldwide operational stock of industrial robots: **1.5 million of units**
- Value of the global market of industrial robots: **US\$ 10.7 billion**
- Value of the global market of robotic systems: **US\$ 32 billion**

Industrial robotics: some trends

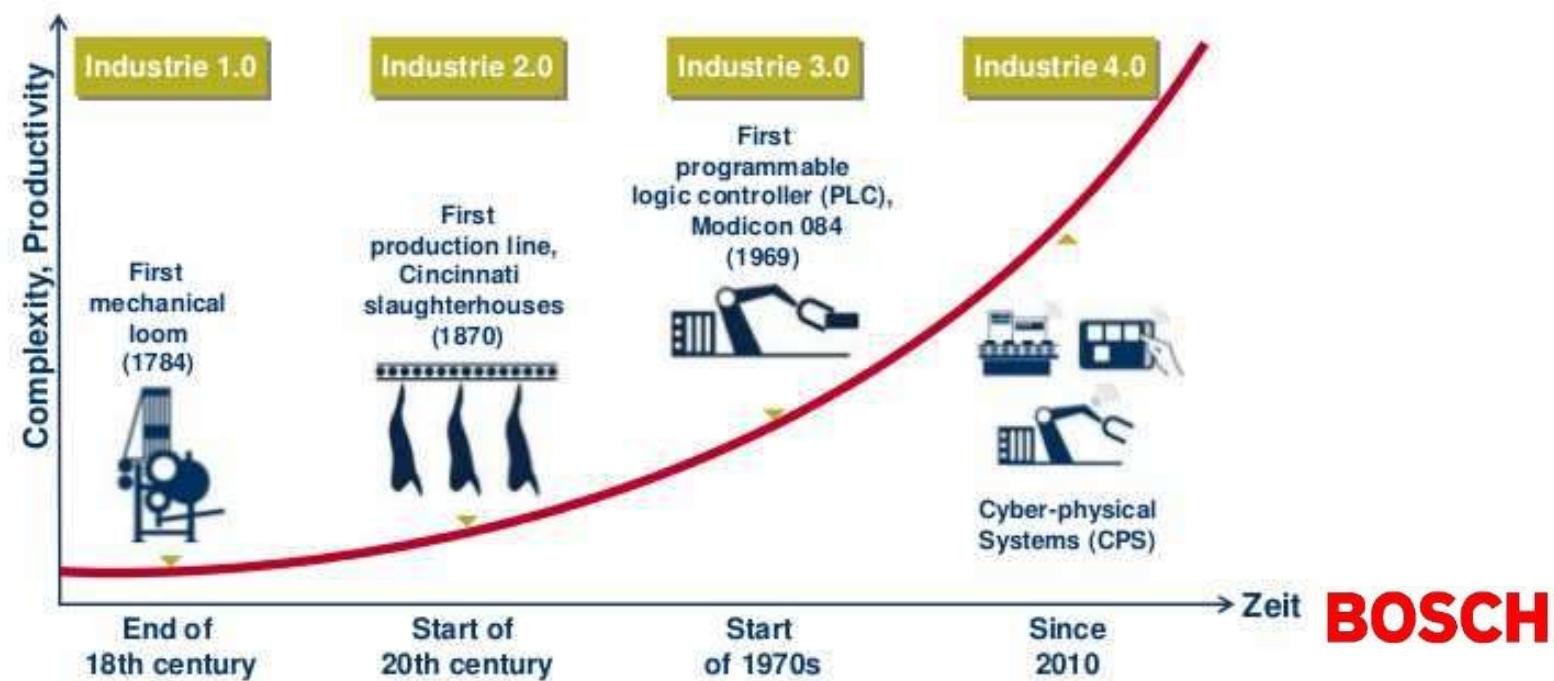

Source: Trendonline

Industry 4.0

- Robots as key components in the manufacturing of Industry 4.0
- Integration of machinery, warehousing systems and production facilities as Cyber-Physical systems
- Flexibility, cost effectiveness and productivity in smart factories

Collaborative robotics

- Humans and robots collaborating at the same task
- Increase productivity
- Particularly interesting for SMEs
- Assist the aging workforce

Source: KUKA

Collaborative robotics

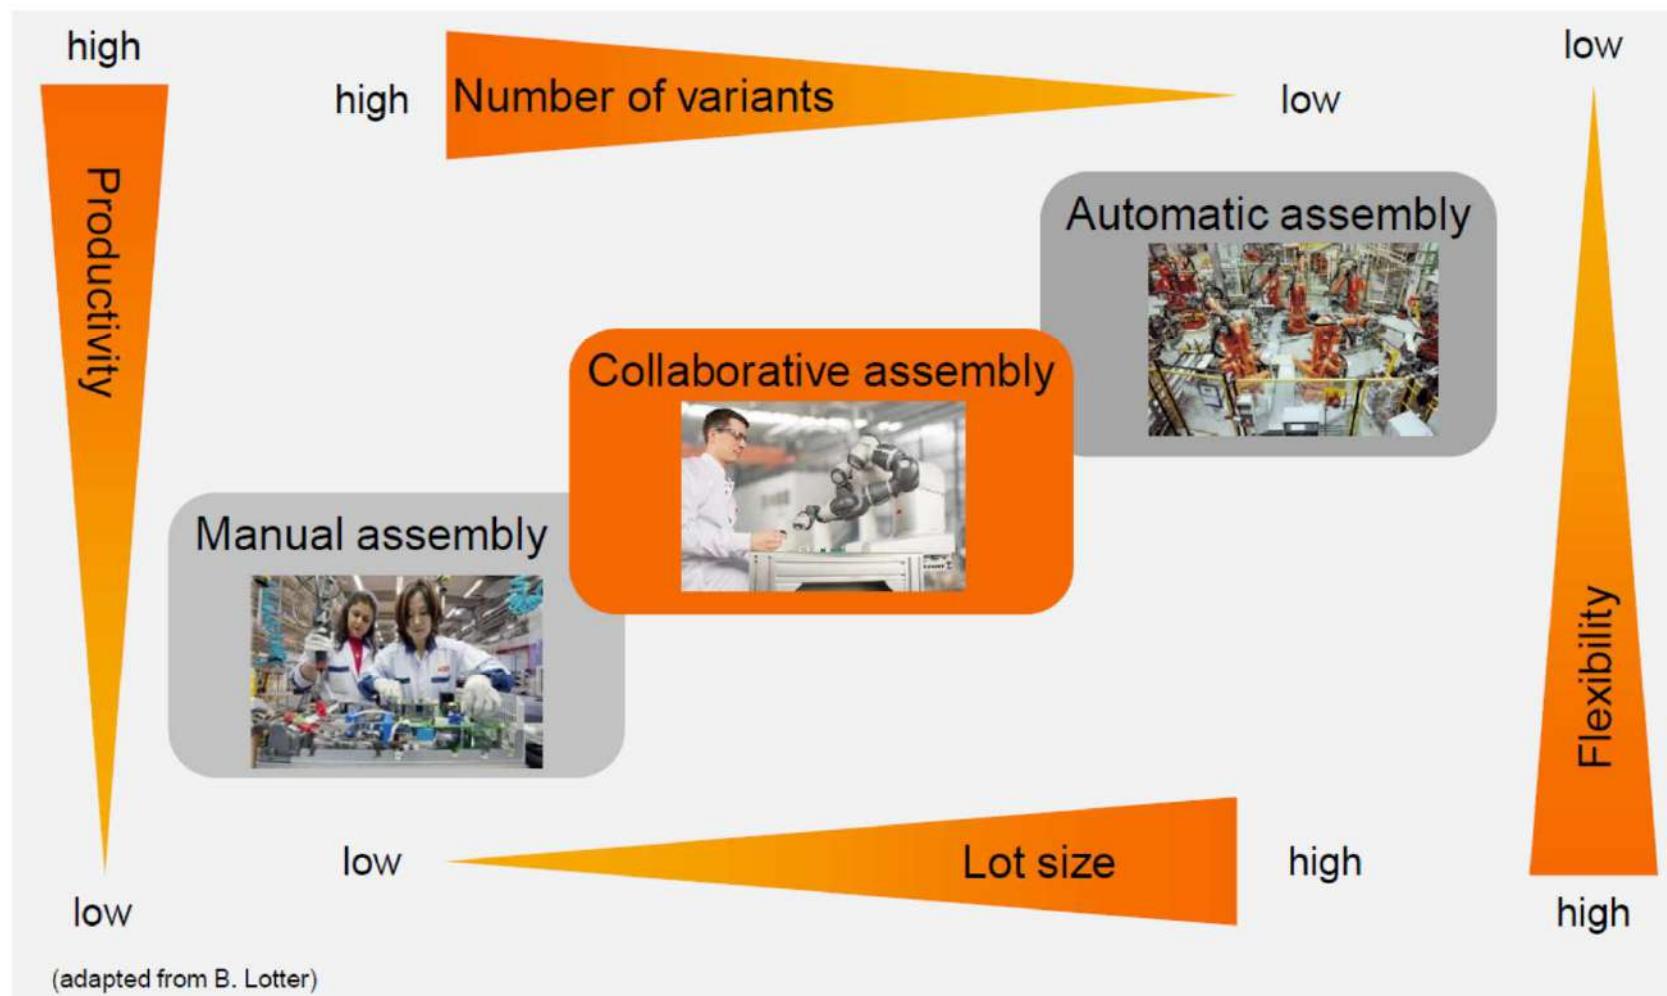

- Dual arm manipulators
- Low inertia, low payload, still good precision
- Good potential for assembly of electronic parts

Source: ABB

Collaborative robotics

Collaborative operations

- ❖ Safety-rated monitored stop

Source: ABB

- ❖ Hand-guiding

Source: ABB

Source: ABB

Source: KUKA

- ❖ Speed and separation monitoring

Source: ABB

- ❖ Power and force limiting by inherent design or control

Source: ABB

Source: KUKA

Source: Universal Robot

Easy-to-use robots

- New programming interfaces
- Decrease of the deployment time
- High potential for SMEs

Source: Universal Robots

Mobile robot manipulators

- Unlimited workspace
- Support human-robot interaction
- Support flexible manufacturing

Source: KUKA

New application fields

Pharmaceutical industry

- Robots for clean room are required
- High potential for automation

Source: Kawasaki

Construction industry

- Heavy load robots
- Can be used for monotonous tasks (handling of bricks and heavy blocks)

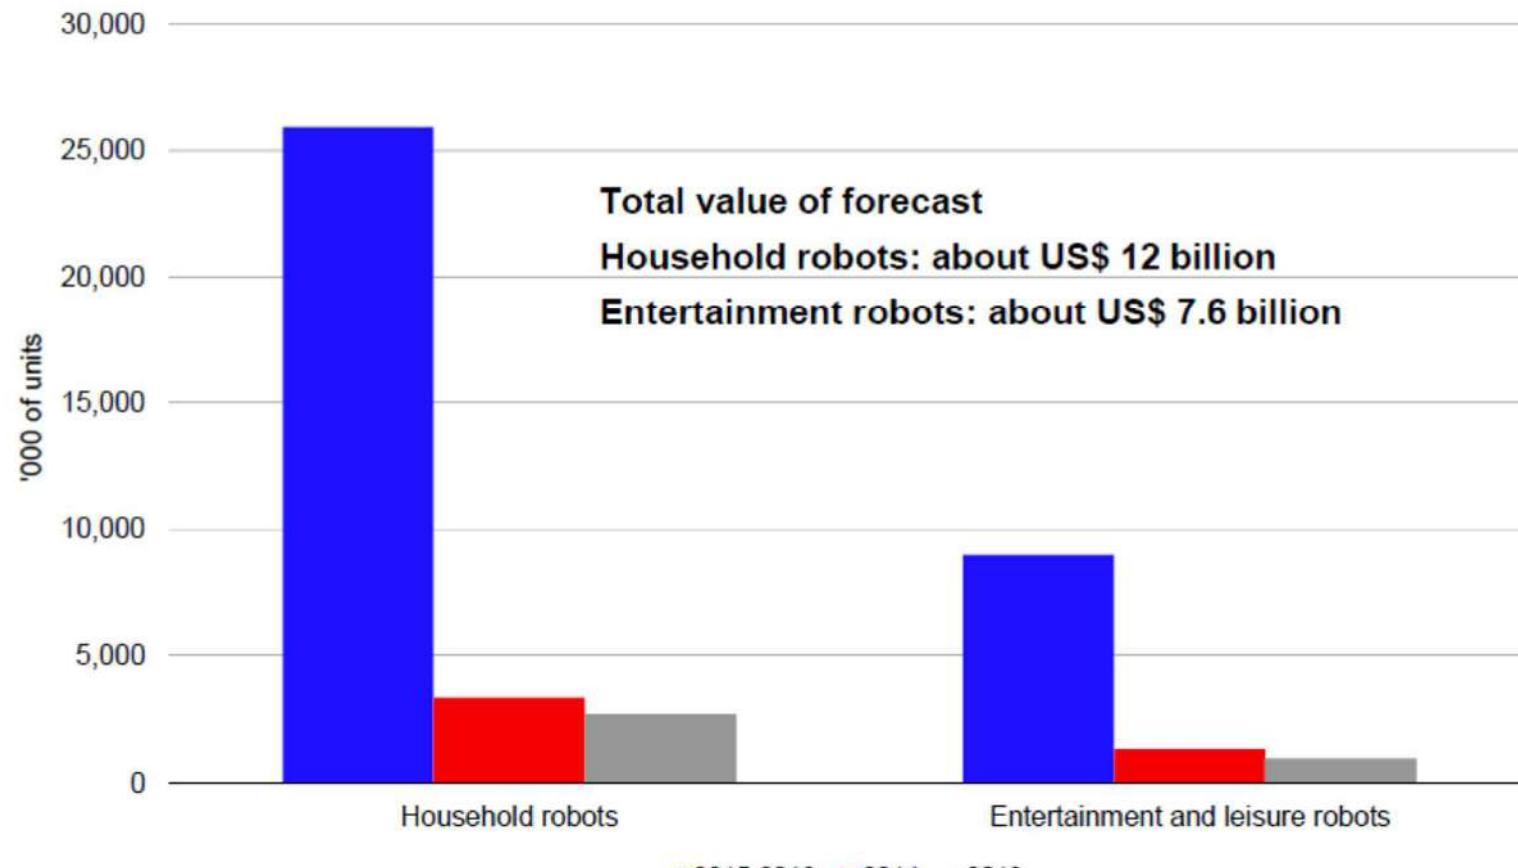

Source: RobotWorx

Source: Aldebaran

Service robots for personal/domestic use

Source: IFR World Robotics 2015

Service robots for personal/domestic use

Main categories

- Vacuum and floor cleaning
- Lawn-mowing robots
- Entertainment and leisure robots

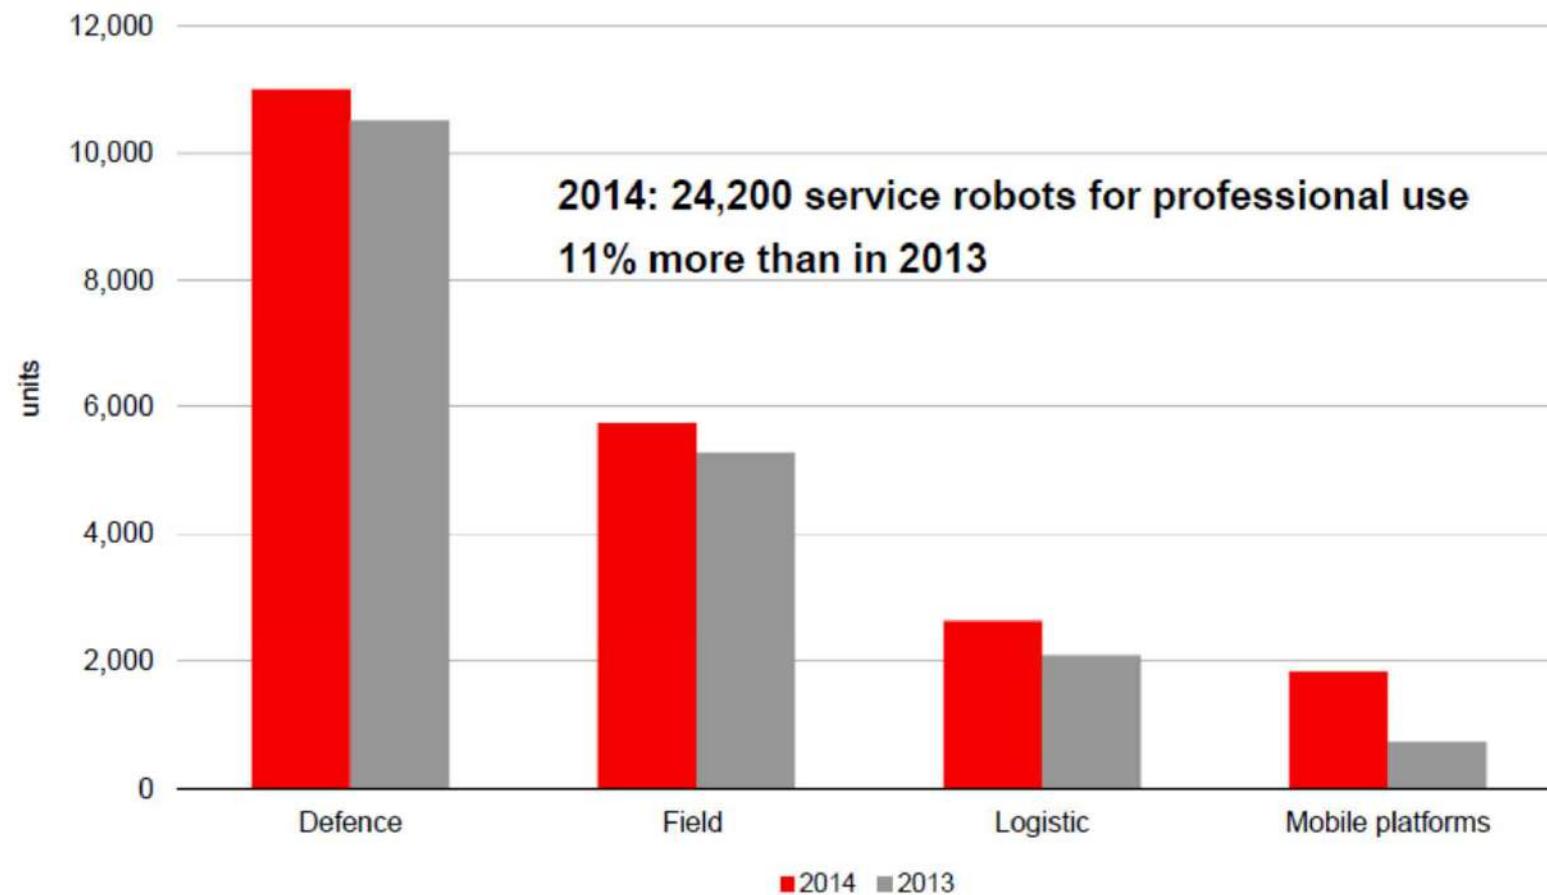

Source: Thymio

Source: Vorwerk

Service robots for professional use

Source: IFR World Robotics 2015

Service robots for professional use

Medical systems

- Diagnostic systems
- Robot assisted surgery or therapy
- Rehabilitation systems

Source: Cyberdyne

Source: AlterG

Field robots

- Milking robots
- Farming and livestock breeding systems

Source: Lely

Source: Blubotics

Logistic systems

- AGVs
- Both for industrial and non-industrial sectors

What is research doing?

Source: Ufficio marchi e brevetti

Human detection and intention estimation

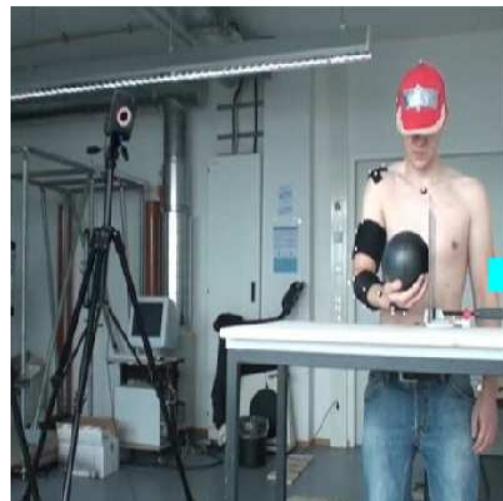

Human is walking
towards the BLUE
destination

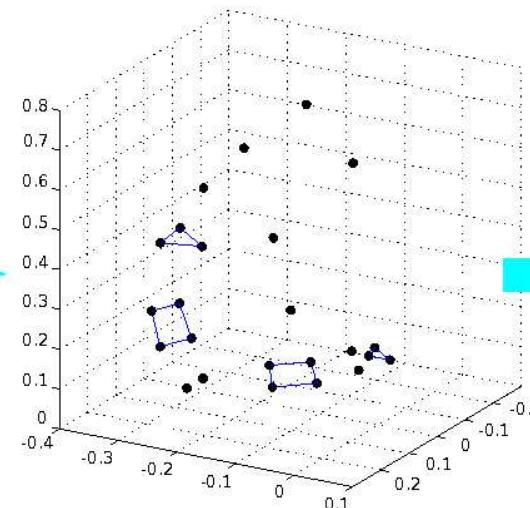

Human-like trajectories

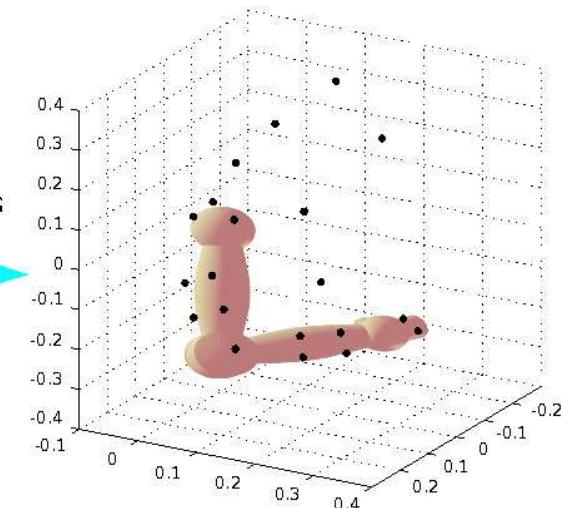

From marker to motion of an equivalent 7 dof arm:

MOTION
CAPTURE

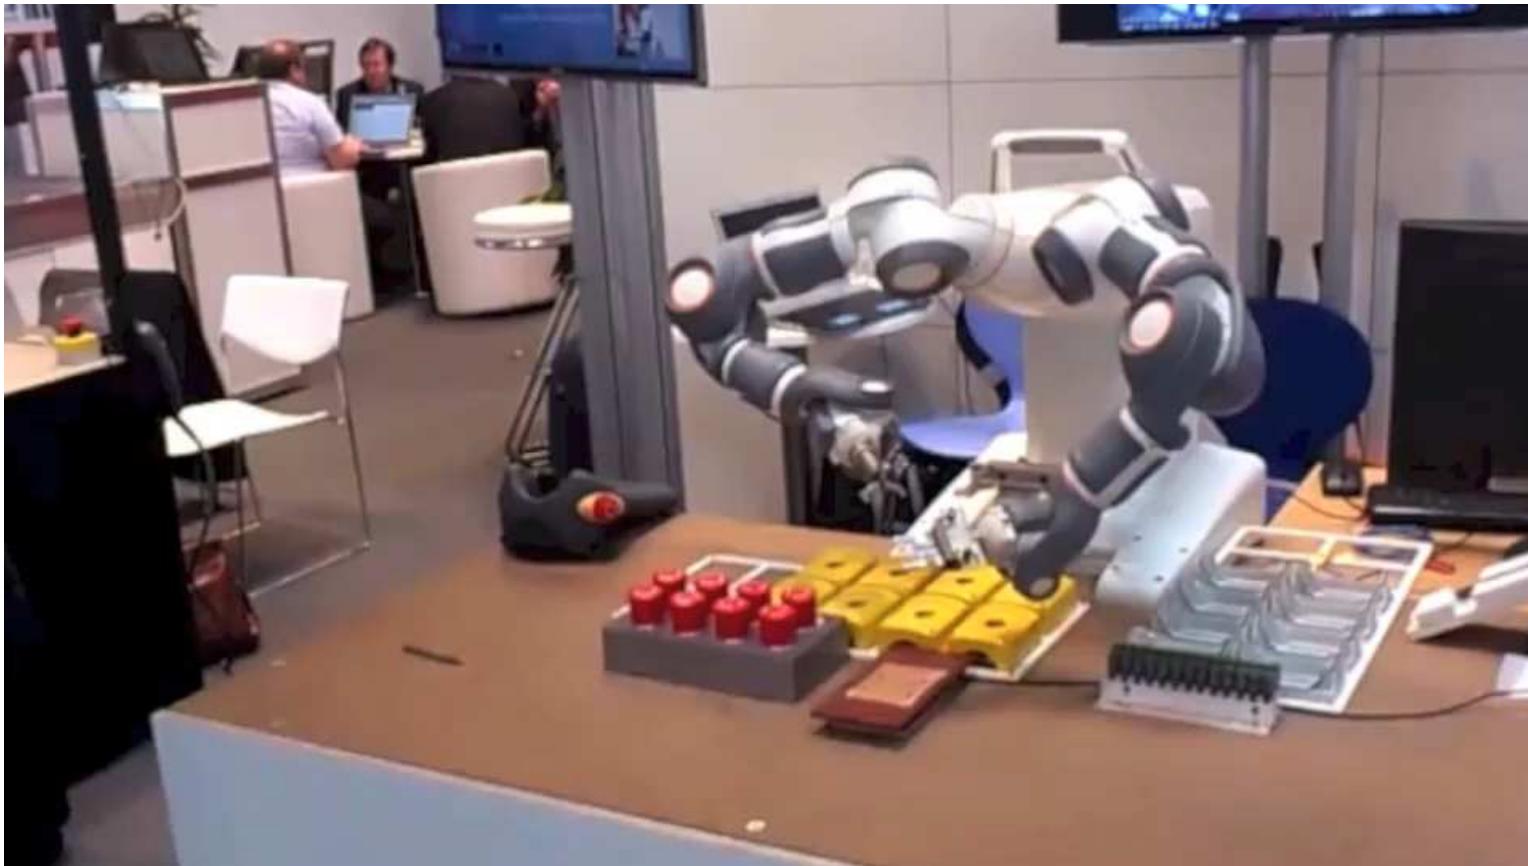

KALMAN
SMOOTHING

Human-like trajectories

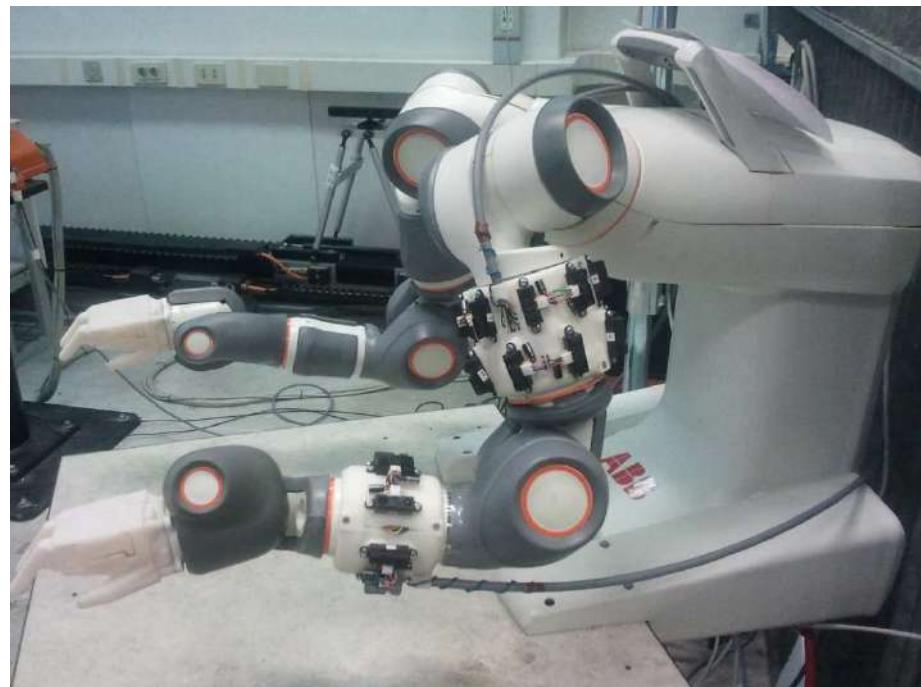

Sensor based reactive control

Multi-spot LED based sensory system on FRIDA

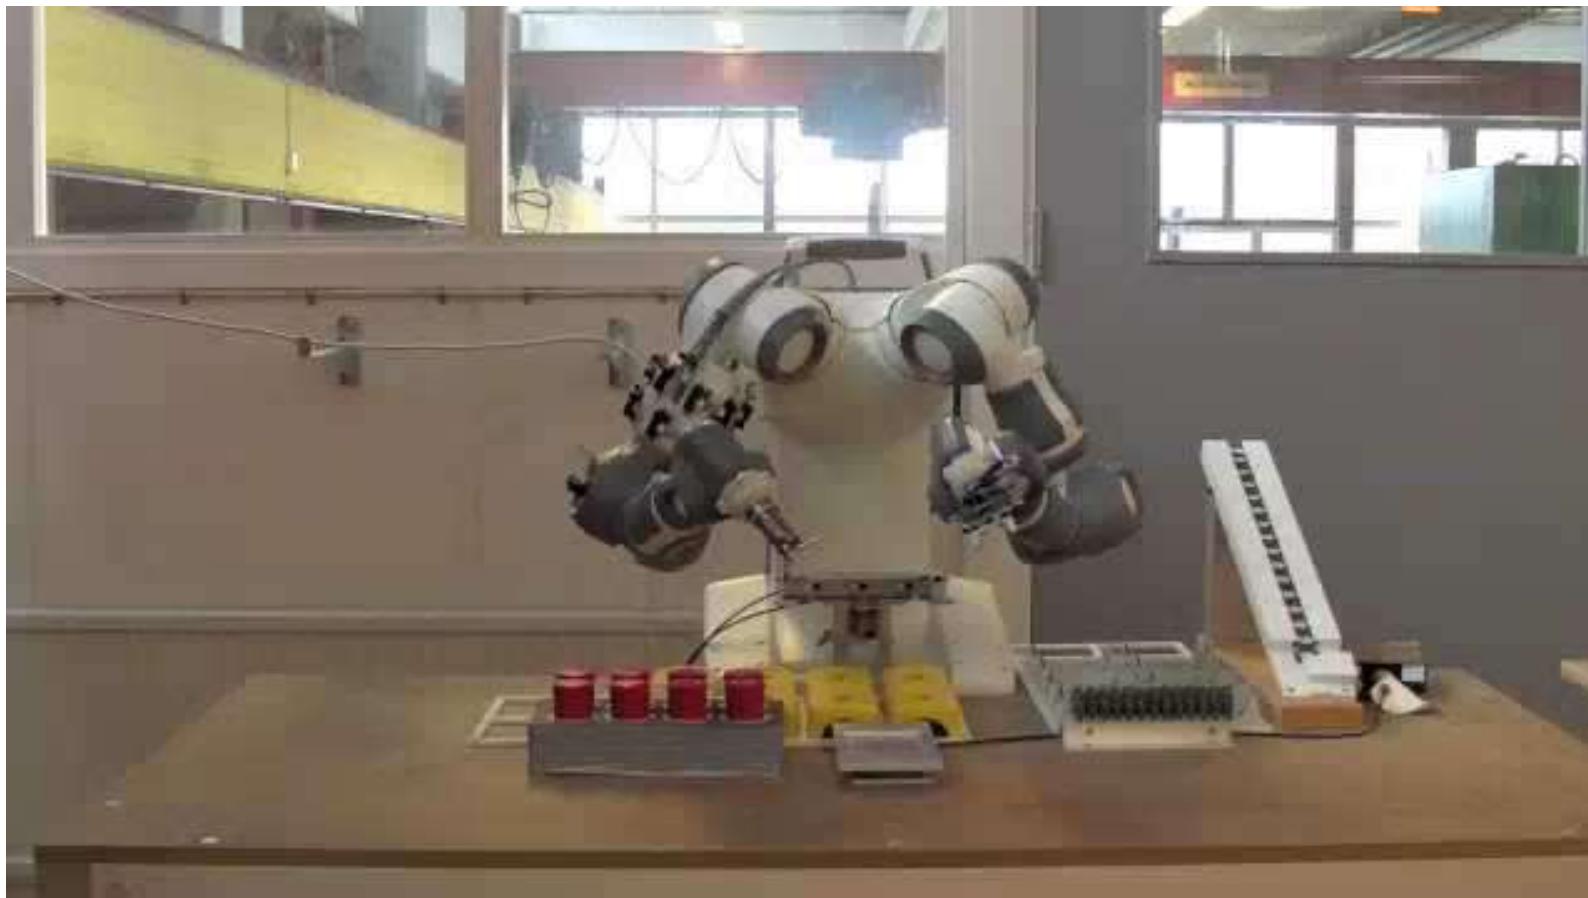

- shells made with 3D printer
- 16 LED sensors on the arm shell
- 8 LED sensors on the forearm shell

Sensor based reactive control

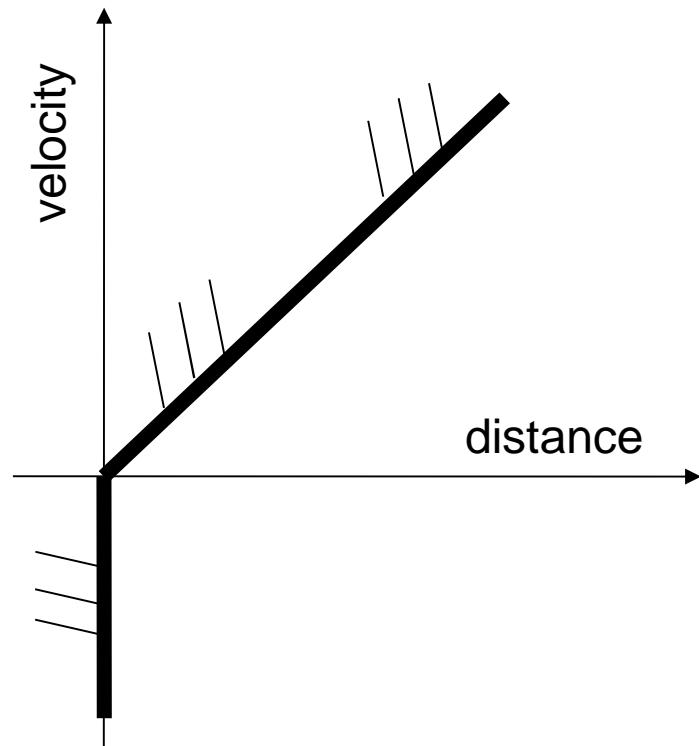

Safety as a motion constraint

Accounting for **safety as a constraint** like in standards.

$$\text{Distance} \geq \text{Velocity} * \text{StoppingTime}$$

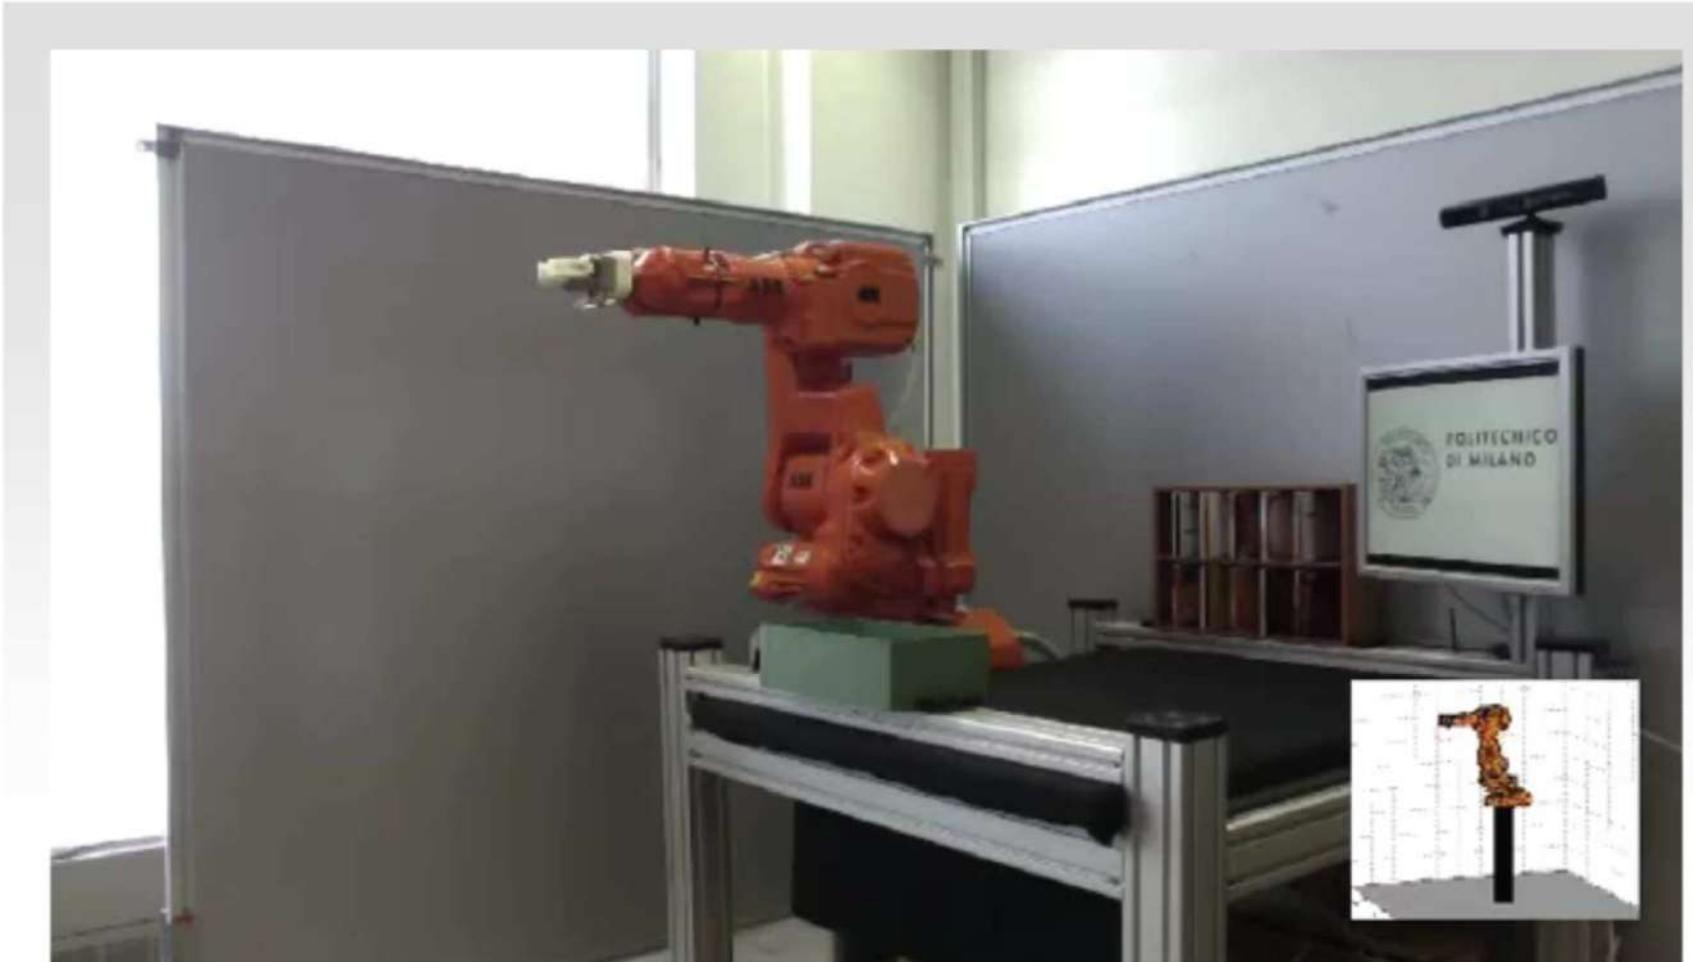

Productivity aims at maximizing the robot speed along the path

Safety constraints might require the robot to slow down on path

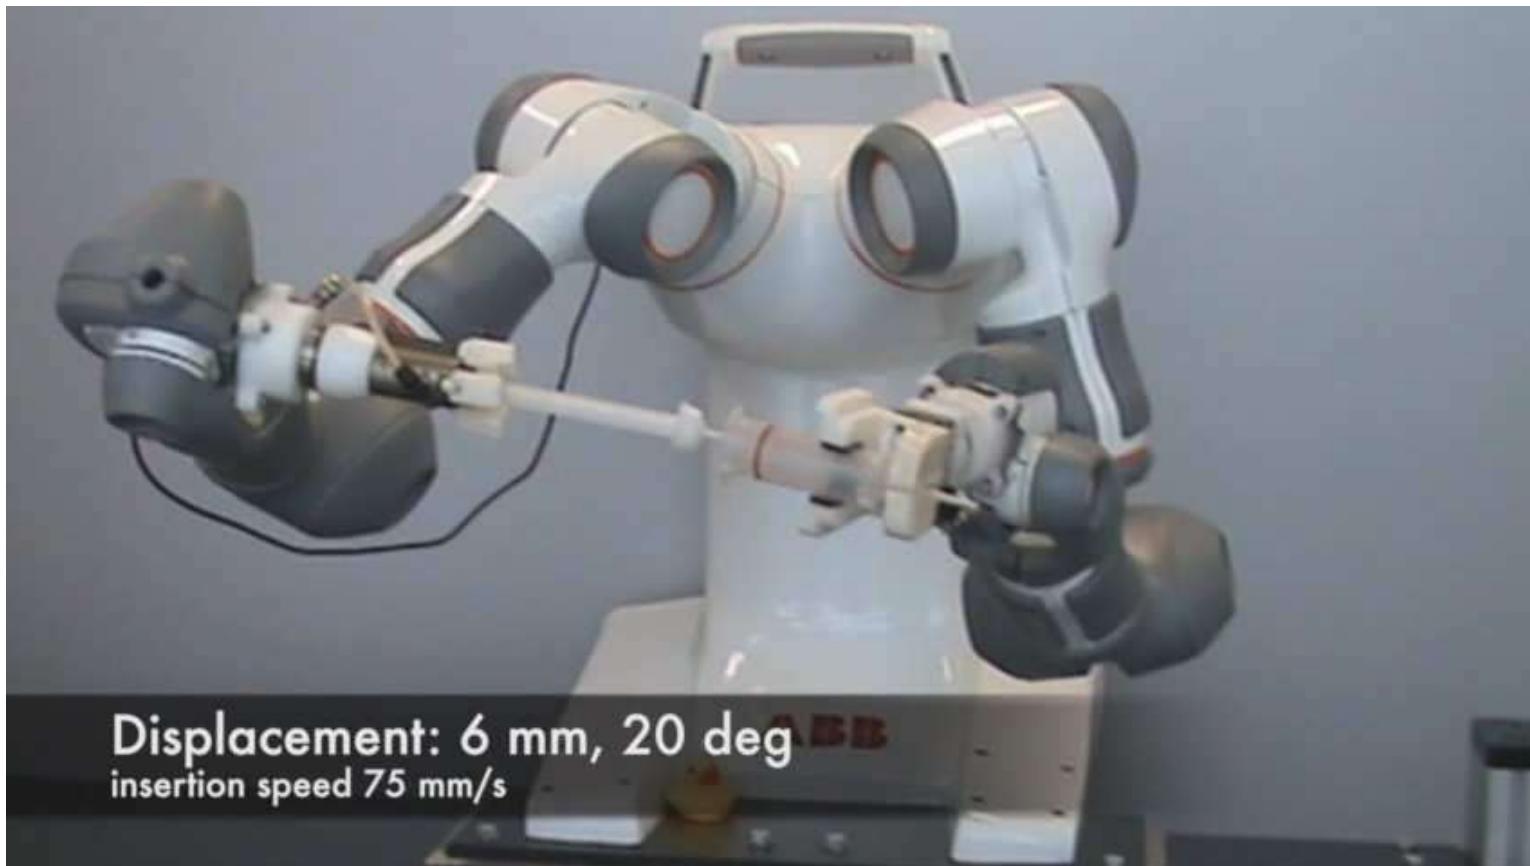

Safety as a motion constraint

New dual-arm applications
