High Power Machining Culture

## Exclusive Design Capability

The best design technologies:  
CAD - FEM - Modal Analyses

## Spindle Heads

Milling heads for machining sculptured surfaces  
with 3/3+2/4/5 axes, with BUSS automatic head  
changing system

# POWER AND TORQUE FO

**JomaX 261** is the new medium-large size milling centre with fixed gantry and moving table for exceptionally flexible machining with 3/3+2/4/5 axes and is pre-arranged for a wide range of customisations. This machine features:

- high dynamics in terms of speed (up to 28 m/min) and acceleration ( $1,5 \text{ m/s}^2$ )
- structural rigidity
- high-volume chip removal capability (up to 75 kW, 2.500 Nm)
- precision
- productivity
- wide possibilities of configuration
- production automation
- compactness.

A particularly interesting solution is the double-table configuration enabling either the pendular machining with workpiece change in masked time, or the synchronized functioning in order to machine components with remarkable dimensions and a total weight up to 50 tons.

# Joma

3-axis milling/boring head  
with external diameter  
100 mm

3-axis milling/boring head  
with external diameter  
200 mm

Right-angle head

Universal bi-directional  
TMX head with  
electrospindle

X Axis: 2 guides, 6 sliding blocks  
Y Axis: 2 guides, 5 sliding blocks  
Z Axis: 3 guides, 8 sliding blocks

W Axis: vertical translation

Wide range of universal milling heads available

## Rigidity

X-Y-Z axes created with high rigidity guides

## Flexible configuration

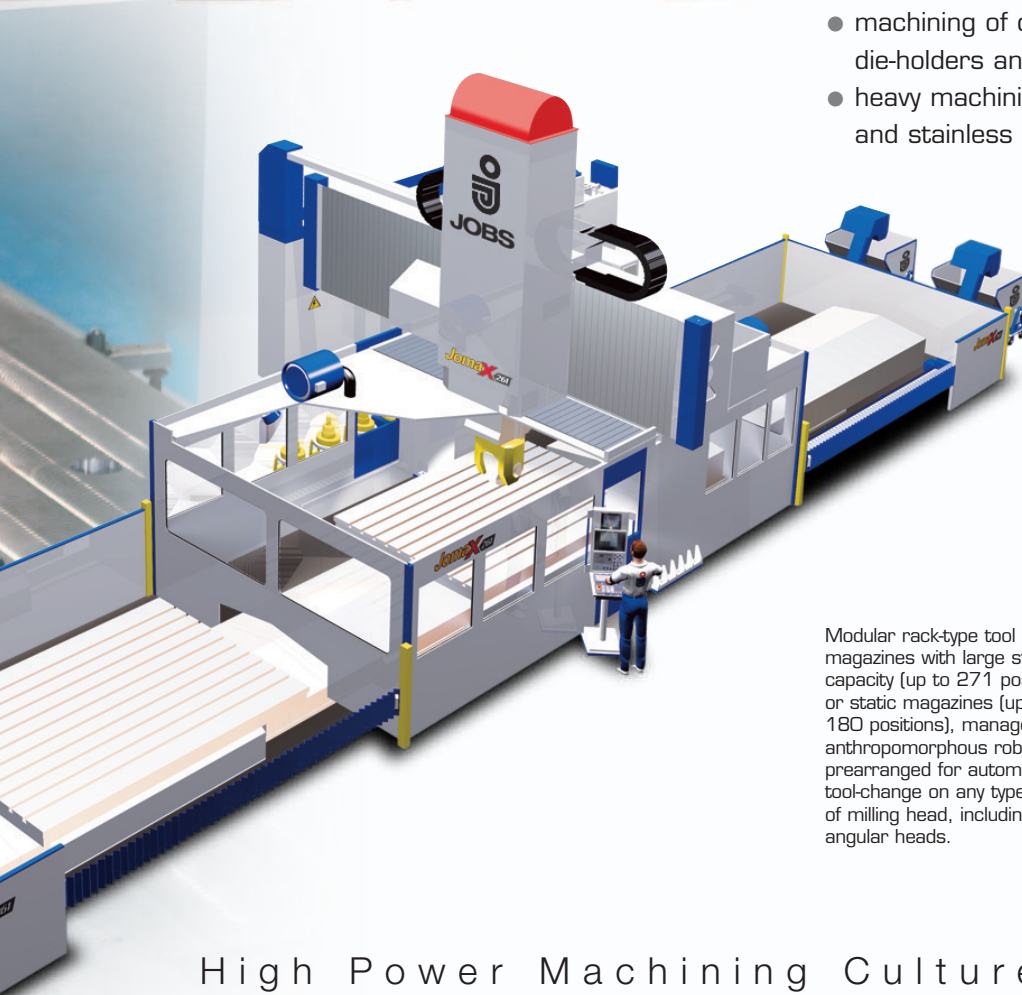

Accessories for personalised applications

# R PRECISION MACHINING

# maX 261

**The performance of JomaX 261** remarkably improves the competitiveness of the End-user for applications in precision general engineering:

- high-power machining with high torque at the spindle for packaging and printing fields, food and textile industries, energy and heavy mechanics industries,
- machining of dies, with particular reference to die-holders and large-size dies,
- heavy machining of large structural parts in titanium and stainless steel.

Modular rack-type tool magazines with large storage capacity (up to 271 positions), or static magazines (up to 180 positions), managed by anthropomorphic robot, prearranged for automatic tool-change on any type of milling head, including angular heads.
